

Write up for Partial Sums

Robert Ebanks

February 12, 2019

- 1 $(i^{**2})/2*i$ (I have no idea why this is indented, something about hbox)
- 2 Product 1 definitely converges because the entire last 15 are ones, 2 and 3 "blow up" as Dr. Helmstutler would say.
- 3 Prod 1 converges to one for aforementioned reasons.
